Supervisor's initial
with date

Time: 3 hours

Max. Marks :100

Instructions:

1. Attempt all questions
2. Figures to right indicate full marks.
3. Draw neat sketches wherever necessary.

Q-1 A company is into electronic segment and wants to increase the supply chain surplus by optimizing the cost in all supply chain process elements. Suggest the company the ways to optimize the cost by giving examples of specific process elements of supply chain. Suggest a new network design that may help to cut down the cost. 20

Q-2 a Explain single segment and multi segment pricing with examples. 20

A semiconductor company has three different customers segments for chips. The customer segment which is ready to place the order before six months is very price sensitive and having the demand function $d=20000-40p$. The customer segment which is ready to place the order before three months is also price sensitive and having the demand curve $d=20000-20p$. The spot market customer segment is less price sensitive and having the demand curve $d=20000-10p$. The production cost is Rs. 200 per unit.

What price the manufacturer should charge to each segment to maximize the profits. What will be the total profit?

Q-2 b A company is into the business of FMCG. It wants to shift to the e-commerce driven supply chain from the conventional base of supply chain. In this process, guide the company on the following with justification. 15

1. Advice on push or pull or push-pull based supply chain strategy
2. Suggest the suitable network
3. Suggest the appropriate technological application to integrate the supply chain

P.T.O.
